

Double Materiality Assessment Results

Materiality assessments are an evidence-based approach used to focus sustainability efforts, aligned to stakeholder expectations.

A **double materiality assessment** assesses both the financial impacts that sustainability related issues, risks and opportunities have on our business (outward-in) as well as the impacts our activities have on society and the environment (inward-out).

In 2025 Brisbane Airport Corporation (BAC) undertook a double materiality assessment to ensure we are responding to the most relevant and pressing environmental and societal impacts, risks and opportunities for our business.

Our stakeholder's insight was incredibly valuable to the process and to ensure we reflected a broad and inclusive range of perspectives. We spoke to 39 people from the following stakeholder groups:

Government

Suppliers

Shareholders

Employees

Customers

Community

Banks

What we heard

- Climate resilience is a critical issue for Brisbane Airport due to its role as critical infrastructure and coastal location
- Transitioning to alternative fuels such as Sustainable Aviation Fuels (SAF) is essential for the aviation industry's success and pathway to net zero
- A safe and secure airport is a fundamental operating requirement.

What was most material

Climate resilience

Sustainable aviation

Health safety & well-being
